Amanda Hein’s love for math is music to the ears of engineering and technology employers in the state of Washington, who are currently importing most of their employees from out of state.

Each year, newly created technology positions vastly outnumber science, engineering and technology graduates.

Eastern Washington University stepped up to help meet this economic need with its new School of Computing and Engineering Sciences, a new state-of-the-art Computing and Engineering Building and a new degree in electrical engineering.

In fact, with nearly 60,000 graduates living and working throughout the state of Washington, our grads are everywhere – and more are coming to a technology company near you!
